

# An eye for detail

Moulding and Millwork gives you a cost-effective means to design and create an elegant home with a unique sense of style while reducing finishing costs and increasing the home's value. Installing crown moulding, chair rails, window casings, baseboards, columns, or mantel trims enhances architectural elegance and economically distinguishes a property from others. Using a variety of moulding profiles will upgrade the look of different rooms and highlight the special care that has gone into your property. Many of our products are designed for use as exterior applications as well.

## What's the difference?

**Crown Moulding.** Crown moulding is a decorative type of trim that is used to line the area where the ceiling of a home meets the wall. Whether you choose to install a formal and dramatic style or streamlined and simple crown moulding style, moulding helps smooth the transition from walls to ceiling while adding unmistakable impact.

**Columns.** Our columns can be used as front porch support columns, decorative columns, and other applications. BlueLinX offers columns that are available in a variety of styles, including plain, fluted, applied or recessed panel, round or square, and craftsman.

**Casing.** Casing is the framework for doors, windows, or stairways. The most visible part of the trim, casings are smaller and thicker than base mouldings.

**Door and Window Trim.** To create passageways and windows with pizzazz, consider door and window trims. From a simple door surround to more elaborate combinations over an arched opening, elegant door trims make an impression.

**Chair Rail and Decorative Moulding.** With the ability to enhance the look of a space to match any style, chair rails and other decorative mouldings can beautifully accent a room while protecting walls from scuffs and scratches.

## INFOCorner

### Choosing the right materials

First, determine if you want to paint or stain. How elaborate do you want the look? How much do you want to spend on your moulding type? In general, moulding falls into one of four categories:

- ♦ **Solid Pine, Oak, Poplar.** Pine has the most distinctive grain. Oak has tighter grain and poplar has the most consistent grain of the three. Pine has a yellowish appearance while poplar is lighter. Oak comes in red oak and white oak with variations of cream and brown.
- ♦ **Finger-Jointed Pine.** Assembled from short lengths of clear lumber. Characteristic interlocking joints and the joining process results in a length of timber of equivalent strength to solid lumber.
- ♦ **Primed Pine.** Prepared for painting with a coat of primer.
- ♦ **MDF (Medium Density Fiberboard).** Prepared for painting with a coat of primer. Appears as if it's been painted white.
